- Idle stabilisation
- Race proven
- Easy starting without kickback
- Extreme temperature safe
- Eliminates points, condensers and auto advance unit
- Made in Australia

The Tri-Spark 'Classic Twin' digital electronic ignition is a proven drop-in system for British twins. There's no guess work and no tuning required.

It doesn't look like an aftermarket accessory because everything fits neatly under the cap. This unit is compatible with a wide range of ignition coils including our Tri-Spark Power coils designed to look and fit like the original Lucas coils. It also features automatic dwell control for minimum battery drain and maximum spark without unnecessary heating in the coils.

Suitable for use with 2 of our 6 volt coils or one dual output coil (must be long dwell type). Electronic advance for reliable jitter free spark timing (with extra spark retard for easy kick starting and idle stabilisation).

Tri-Spark: The world's leading ignition for classic motorcycles.
